## General Description

The DAT-15575-SP is a 75Ω RF digital step attenuator that offers an attenuation range up to 15.5 dB in 0.5 dB steps. The control is a 5-bit serial interface, operating on a single +3 volt supply. The DAT-15575-SP is produced using a unique CMOS process on silicon, offering the performance of GaAs, with the advantages of conventional CMOS devices.

### Notes:

1. Both RF ports must be held at 0VDC or DC blocked with an external series capacitor.
2. Latch Enable (LE) has an internal 100KΩ resistor to V<sub>DD</sub>.
3. Place a 10KΩ resistor in series, as close to pin as possible to avoid freq. resonance.
4. Refer to Power-up Control Settings.
5. Place a shunt 10KΩ resistor to GND.
6. The exposed solder pad on the bottom of the package (see Pin configuration) must be grounded for proper device operation.

DAT-15575-SP+  
DAT-15575-SP

The DAT-15575-SP, uses a common 5-bit serial word format, as shown in **Table 3**: 5-Bit attenuator Serial Programming Register Map.

Bit B4 corresponds to the 8-dB Step and the last bit, the LSB, corresponds to the 0.5 dB step.

Table 3. 5-Bit attenuator Serial Programming Register Map					
B5	B4	B3	B2	B1	B0
0	C8	C4	C2	C1	C0.5

MSB (first in)      Note: The start bit (B5) must always be low to prevent the attenuator from entering an unknown state.      LSB (last in)

## Power-up Control Settings

The DAT-15575-SP always assumes a specifiable attenuation setting on power-up, allowing a known attenuation state to be established before an initial serial control word is provided.

When the attenuator powers up, the five control bits are set to whatever data is present on the five data inputs (C0.5 to C8).

This allows any one of the 32 attenuation settings to be specified as the power-up state.
